Identifying and selecting genes for survival or virulence of mycobacteria by a comparative genomic analysis of the sequences of Mycobacterium tuberculosis and M. leprae.

Claim 17; Page 714-715; 874pp; English.

This invention relates to a novel method for identifying essential genes for survival or virulence of mycobacteria species. The method comprises aligning the genomic sequence of a first mycobacterium species on a genomic sequence of a second mycobacterium species and selecting a polymucleotide sequence that is highly conserved in both genomes with no counterparts in other bacterial genomic sequences and that corresponds to an essential gene for the survival or virulence of mycobacterium species. The method of the invention is useful for detecting M. tuberculosis or M. leprae infection. The method reduces the number of potential new targets and protective antigens for new drugs and vaccine compositions to treat and prevent mycobacterial diseases, particularly tuberculosis and leprosy. The present sequence represents a marker protein from

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         and at least one antigen, which is a protein or peptide of interleukin (IL)-5, IL-13 or eotaxin and is bound to the virus-like particle, or a core particle with at least one first attachment site and at least one antigen with at least one second attachment site, where the antigen is a protein or peptide of IL-5, IL-13 or eotaxin. The second attachment site antigen or antigenic determinant. The second attachment site antigen or antigenic determinant. The second attachment site is capable of association to the first attachment site, and where the antigen or antigenic determinant and the core particle interact through the association to form an ordered and repetitive antigen array. The compositions are useful as medicaments, or for manufacturing a medicament or a vaccine for treating allergic eosinophilic diseases, e.g. asthma, or Hodgkin's lymphoma and related diseases.                                                                                                                                                                                                                                                       The invention comprises a method of producing a target peptide. The C-terminal end of the target peptide is fused via a protease-susceptible linker to parathyroid hormone (PTH) residues 1-34. The method of the invention is useful for the clean and efficient production of a target peptide at a high expression rate on an industrial scale without the need protence the N-terminal methionine from the product. The peptides produced by the method of the invention are suitable for pharmaceutical and other uses. The present protein sequence was used in the invention
Production of target peptide comprises cleavage of fusion peptide with parathyroid hormone peptide for efficient manufacture of target peptide without the need to remove N-terminal methionine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ő

                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                The present invention relates to an isolated nucleic acid molecule encoding a cell proliferation-related polypeptide. The nucleic acid molecule and the encoded polypeptide, and methods are useful for modulating cell proliferation, senescence, differentiation, development, and stress response in plants, and for producing enhanced food crops. The present sequence represents a cell proliferation-related polypeptide. The present sequence is published separately from the main body of the specification as EPO data.

The DNA and protein sequences of the invention are useful for regulating and controlling plant maturation and development, including proliferation, senescence, disease-resistance, or stress response. They are also useful for producing transgenic plants having improved properties, e.g. tolerance to pests, herbicides, or biotic or abiotic stresses, improved nutritional value, increased yield or proliferation, or improved structure causing less loss from lodging or shattering. The present amino acid sequence represents a rice stress-related protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Substance PF1022; biosynthesis; transgenic; chorismic acid; anthelmintic; phenylalanine; p-aminophenylpyruvic acid; pharmaceutical;
                                                                                                                                                                                                                New isolated nucleic acids and proteins, useful for producing transgenic plants having improved properties, e.g. tolerance to peets, herbicides, or biotic or abiotic stresses, improved nutritional value, or increased yield or proliferation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel biosynthesis gene-transferred transformants for producing PF1022 substance derivatives by fermentation, as pharmaceuticals or veterinary drugs with anthelmintic activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

having a 16S rRNA DNA sequence fully defined in the specification, provided that the bacteria is not a strain of Porphyromonas gingivalis designated as dog 20B. The invention has antiinflammatory applications whilst the bacteria and polymucleotide may be useful for preparing a whilst the bacteria so preventing periodontal disease in companion animals. The current sequence is that of the Porphyromonas-related vector amino-terminal peptide of the invention.
                       The present invention relates to transformants capable of producing PF1022 substance derivatives. These were obtained by transferring a gene participating in the biosynthesis pathway from choriamic acid to paminophenylpyruvic acid (biosynthesis gene) into a phenylalanine-requiring host derived from an organism producing the PF1022 substance. The transformants are producing PF1022 substance derivatives by fermentation, for use as pharmaceuticals or veterinary drugs. The present sequence is a fragment of a Myroclia sterilia protein described in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    pigmented anaerobic bacteria, useful for preparing a vaccine or preventing periodontal disease in companion animals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a novel isolated pigmented anaerobic bacteria

The inferior of a lawsonia spo. polypeptides with a B-cell or T-cell epitope of a Lawsonia spo. polypeptide such as filbs, filk, ntrC, gluh, moth, moth, tlyC, ytfM or ytfM polypeptides. (I) is useful for dentifying whether or not a portione or avian animal has suffered from a past infection, or is currently infected, with Lawsonia spo or a microorganism that is immunologically cross-reactive with Lawsonia spo. Antibodies are useful for diagnosing infection of a portion or avian animal by Lawsonia spp. or a microorganism that is immunologically cross-reactive with Lawsonia spp.

Antibodies are useful for diagnosing infection of a portion or avian animal by Lawsonia spp. A mucleit acid encoding a Lawsonia spp. Immunogen is useful as probes or primers for detecting Lawsonia spp. Immunogen is useful as probes or primers for detecting Lawsonia spp. Immunogen is useful as probes or primers for detecting Lawsonia spp. Immunogen is useful as probes or primers for detecting Lawsonia spp. Immunogenia min a biological sample derived from a porcine or immals against intestinal diseases collectively known as intestinal denominations of the proplylaxis and treatment of proliferative enterities and centerities. (I) is also useful in vaccines for the prophylaxis and treatment of protein related peptide represents a lawsonia intracellularis immunogenic protein related peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New immunogenic polypeptide comprising epitope of Lawsonia spp. polypeptide such as fihB, fl1R, ntrC, glnH, motA, polypeptides, useful in vaccines for treatment of porcine proliferative enteropathy in pigs and
                                                                                                                                                                                                    ytfM; ytfN; porcine;
                                                                                                                                                                                                Immunogen, fihB; fliR; ntrC; glnH; motA; motB; tlyC; ytfM; ytfN; porcir pig; avian; bird; porcine proliferative enteropathy; PPB; intestinal adenomatosis complex; porcine intestinal adenomatosis; PIA; necrotic enteritis; proliferative haemorrhagic enteropathy; regional ileitis; haemorrhagic bowel syndrome; vaccine; antibacterial; porcine proliferative enetritis; Campylobacter spp.-induced enteritis.
                                                                                                                                                        Lawsonia intracellularis immunogenic protein related peptide #6.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention describes an isolated or recombinant immunogenic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention describes an isolated or recombinant immunogenic polypeptide (I) which comprises, minds or cross-reacts with a B-cell or T-cell epitope of a Lawsonia spp. polypeptides. (I) is useful filk, ntrC, gluH, motA, motB, tlyC, ytfM or ytfW polypeptides. (I) is useful for identifying whether or not a porcine or avian animal has suffered from a pertial infection, or is currently infected, with Lawsonia spp. or a microorganism that is immunologically cross-reactive with Lawsonia spp. Or animal by Lawsonia spp. or a microorganism that is immunologically cross-reactive with Lawsonia spp. or a microorganism that is immunologically cross-reactive with Lawsonia spp. or creative with Lawsonia spp. . A nucleic acid encoding a Lawsonia spp. creative with Lawsonia spp. . A nucleic acid encoding a Lawsonia spp. creative with Lawsonia spp. or animal subject. (I) is preferably useful for vaccinating porcine or avian animal subject. (I) is preferably useful for vaccinating porcine or animals against intestinal diseases collectively known as porcine

```
The invention relates to a polynucleotide (or its complement, protein encoding fragment or reverse complement), comprising a nucleotide sequence encoding a polypeptide comprising an amino acid sequence involved in or associated with the biosynthesis of isoprenoids in a rice plant. Also included are an isolated polypeptide involved in or associated with the biosynthesis of isoprenoids in a plant, an expression cassette comprising the polynucleotide, a host cell comprising the expression cassette, and a transgenic plant comprising the expression cassette. The polypeptides and polynucleotides include those associated
                                                                                                                                                                  New isolated polynucleotides and polypeptides associated with isoprenoid synthesis in plants, useful for producing transgenic plants, for targeted gene disruption, as well as markers or probes.
                                                                                                                                                                                                                                                                                                                                                                                                     Claim 4; SEQ ID NO 120; 117pp; English.

with the biosynthesis of isopentenyl diphosphate (IPP) and dimethylallyl alcohol (DMAPP), the biosynthesis of short-chain plastid cancelly the biosynthesis of gibberellins, the biosynthesis of carotemoids and/or abscisic acids, the biosynthesis of tocopherols, plastoquinone and/or phylloquinone biosynthesis of tocopherols, plastoquinone and/or phylloquinone biosynthesis of tocopherols, biosynthesis of monterpenes and sesquiterpenes, protein prenylation, and biosynthesis of chlorophyll or haeme. Also disclosed are banana, wheat and corn homologues of some of the rice polynucleotides. The polynucleotides are useful for producing transgenic plants, where the genome is augmented by a nucleic acid molecule of the invention, or in which the corresponding gene has been disrupted, e.g. to result in a coloss, a decrease or an alteration in the function of the product encoded by the gene. The plants may also have increased yields and/or produce a better quality product than the corresponding wild-type plant. The as markers and probes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form at directly from USPPTO at the colon of the connection of the produce of the colon of the produce and form the form of the plants as well as mater of the printed specification, but was obtained in electronic form the directly from USPPTO at the plants of the printed specification, but was obtained in electronic form the part of the printed specification, but was obtained in electronic form at the plants and the correspondence and the corres

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Homo sapiens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  11-OCT-2001.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ABG12558;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       g
```

The invention relates to isolated polynucleotide (I) and polypeptide (II)

Claim 20; SEQ ID NO 42917; 103pp; English.

```
reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymorleotides are also used an diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) to to traat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (II) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymorleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations in diagnostics, forensics, gene mapping, identification of mutations are responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at Esquences.

the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated continued to polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation, (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway required for the tay against a biological pathway in which a proliferation or that inhibits cellular proliferation of an influence or cellular proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound; a activity; (11) a culture compound that inhibits proliferation of the strains is present in a culture or collection of the strains is present in a culture or collection of the strains is present in a culture or collection of the strains is present in a culture or collection of the strains in speament in a culture or collection of the strains or screening for homologous nucleic acids are useful for confileration of an organism. The antisense incleic acids are useful for required for proliferation to isolate candidate molecules for rational cultured for proliferation in cells other than S. aureus, S. typhimurium, CC the target prokaryotic essential genes. Note: The sequence data for this patent did not forma part of the printed specification, but was obtained to in electronic format directly from MIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

                                                  encoding an Moraxella
                                                                                                                                                                                                                                                                                                                                                                                         transgenic; plant; enhanced tolerance to abiotic stress; glyphosphate tolerance; hormone sensitivity; disease resistance; sugar sensing; flowering; flowering; flowering; flowering; flowering; flowering partern; apical dominance; trichome; stem morphology; root growth; root hair; sed development; cell proliferation; cell differentiation; premature senescence; necrosis; plant size; leaf morphology; seed morphology; seed biochemistry; root anthocyanin; plant anthocyanin; light response; shade avoidance; bioinformatic; transcription factor; gene; ds.
                                              The invention relates to an isolated nucleic acid encoding an Moraxells catarrhalis polypeptide. The nucleic acid is useful for preparing a composition for diagnosing, preventing or treating infection caused by Moraxella catarrhalis. The present sequence represents the amino acid sequence of a M. catarrhalis protein.
                                                                                                                                                                              Gaps
                                                                                                                                                                              .;

The invention describes a transgenic plant comprising a recombinant polynucleotide of any one of more than 500 nucleotide sequences fully defined in the specification or its complement. The method of the complement. The method of the complement of the complement. The method of the chancing of the sensitivity; disease resistance; sugar sensing; early or late flowering; sensitivity; disease resistance; sugar sensing; early or late flowering; pattern, reduced apical dominance, reduced trichome density; lack of trichomes; reduced ectopic trichome development; altered trichomes development; altered trichome development; increase in trichome number; altered stem morphology; increased root growth; increased root hairs; altered seed development; premature senescence; increased necrosis; increase in seedling or plant size; decreased plant size; leaf morphology; seed morphology; seed blochemistry; increase in root anthocyanins; increase in plant cares anthocyanins; or alteration in light response or shade avoidance. The transgenic plant, polynucleotides and polypeptides are useful in blochometric search methods This is the amino acid sequence of a plant transcription factors isolated in the invention, that can be used in the transcription of a transgenic plant with altered traits.
New transgenic plant comprising a recombinant polynucleotide of any one of more than 500 nucleotide sequences, useful in bioinformatic search

New transgenic plant, useful in developing phenotypes with altered or improved characteristics or traits.

Claim 1; SEQ ID NO 1339; 213pp; English.

The invention relates to a transgenic plant comprises a recombinant polynucleotide having a polynucleotide sequence or its complementary sequence comprising a gequence or its complementary consequence comprising a gequence encoding a polypeptide, that initiates transcription (i.e. a transcription factor) from Arabidopsis, Soybean, Rice, Rape or Corn, comprising any of the sequences appearing as AD00158 - AD0013519 - AD0013559. Also included are using a transgenic constitutive, inducible or tissue-specific promoter and a recombinant polymucleotide described above), a host cell comprising the expression cassette, producing a modified plant having a modified trait, identifying a factor that is modulated by or interacts with a polypeptide encoded by the polymucleotide sequence that is subject to a regulatory effect of any of the polymeleotide sequence that is subject to a regulatory effect of any of transgenic plant is useful for producing a plant that has an altered transgenic plant is useful for producing a plant that has an altered contining, germination in cold conditions, freezing tolerance to explain to the early colerance to thilling, germination in cold conditions, freezing tolerance to console to hormone sensitivity, reduced sensitivity to nitrogen limitation, altered susceptibility to response to ethylene, disease resistance, altered susceptibility to Evrysiphe, altered susceptibility to Pusarium, altered susceptibility to Erysiphe, altered susceptibility to Pusarium, altered susceptibility to Erysiphe, altered susceptibility to Pusarium, altered susceptibility or Erysiphe, altered susceptibility to Pusarium, altered susceptibility to Sclerotina, altered susceptibility to germination and seedling vigor, early flowering, laterial change; a change in the prido of flowering, a lack of a shoot meristem, reduced meristeme cell

```
differentiation, ancered purifications, and anatoming partern, reduced aptical dominance, reduced trichome development, altered stem morphology, increased root growth, increased root hairs, altered stem morphology, increased root growth, increased root hairs, altered seed development, altered cell crowled plant size, a change in leaf morphology, increased leaf size, a change in leaf morphology, increased leaf size, a change in leaf morphology, increased altered leaf development, increased leaf size, altered seed shape, change in leaf blochemistry, increased leaf size, altered seed shape, change in leaf blochemistry, increased leaf anthoryanins, an alteration in leaf prenyl lipid content, increased leaf anthoryanins, an alteration of leaf fatty acid content, an alteration of leaf glucosinolate content, change in seed fatty acid content, increase in seed fatty acid content, decrease in seed fatty acid content, decrease in seed fatty acid content, increase in seed fatty acid content, decrease in seed fatty acid content, increase in seed protein content, decrease in seed fatty acid content, increase in seed protein content, decrease in seed fatty acid content, increase in seed protein content, increase in secd content, increase in plant anthocyanins, and alteration in clight response or shade avoidance. The present sequence represents an element of content content sequence represents an element of content content sequence represents an element of content content content sequence represents and alteration in clight response or shade avoidance. The present sequence represents an element sequence of a thalecress transcription factor isolated from Rice.

### Sequence 25952, Application US/09252991A

### Patent No. 6551795

### CENERAL INFORMATION:

### APPLICANT: Marc J. Rubenfield et al.

### TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS

### TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS

### TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS

### TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS

### CURRENT APPLICATION NUMBER: US 60/074,788

### PRIOR FILING DATE: 1999-02-18

### PRIOR PLICATION NUMBER: US 60/094,190

### PRIOR PLICATION NUMBER: US 60/094,190

Sequence 21423, Application US/09252991A

Patent No. 6551795

GENERAL INFORMATION:
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS;
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION NUMBER: US/09/252,991A

FILE REFERENCE: 107196-116

CURRENT FILING DATE: 1999-02-18

PRIOR APPLICATION NUMBER: US 60/074,788

PRIOR APPLICATION NUMBER: US 60/074,788

PRIOR PRIOR FILING DATE: 1998-02-18

PRIOR FILING DATE: 1998-02-18

PRIOR FILING DATE: 1998-02-18

PRIOR FILING DATE: 1998-02-18

PRIOR FILING DATE: 1998-07-27

NUMBER OF SEQ ID NOS: 33142

This sequence represents a novel recombinant fructosylamino acid oxidase (FADD-L) produced from eukaryotic cells integrated with an RT-FCR product encoding FADD-L derived from Aspergillus terreus GP1 (FERM P-15664). FADD-L can be used for the analysis of "Amadori" compounds
